## 3 Introduction

The following document details the Module Interface Specifications for [Fill in your project name and description —SS]

Complementary documents include the System Requirement Specifications and Module Guide. The full documentation and implementation can be found at ... [provide the url for your repo —SS]

## 4 Notation

[You should describe your notation. You can use what is below as a starting point. —SS]

The structure of the MIS for modules comes from ?, with the addition that template modules have been adapted from ?. The mathematical notation comes from Chapter 3 of ?. For instance, the symbol  $:=$  is used for a multiple assignment statement and conditional rules follow the form  $(c_1 \Rightarrow r_1 | c_2 \Rightarrow r_2 | \dots | c_n \Rightarrow r_n)$ .

The following table summarizes the primitive data types used by Room8.

Data Type	Notation	Description
character	char	a single symbol or digit
integer	$\mathbb{Z}$	a number without a fractional component in $(-\infty, \infty)$
natural number	$\mathbb{N}$	a number without a fractional component in $[1, \infty)$
real	$\mathbb{R}$	any number in $(-\infty, \infty)$

The specification of Room8 uses some derived data types: sequences, strings, and tuples. Sequences are lists filled with elements of the same data type. Strings are sequences of characters. Tuples contain a list of values, potentially of different types. In addition, Room8 uses functions, which are defined by the data types of their inputs and outputs. Local functions are described by giving their type signature followed by their specification.

## 5 Module Decomposition

The following table is taken directly from the Module Guide document for this project.

Level 1	Level 2
Hardware-Hiding	
Behaviour-Hiding	Input Parameters Output Format Output Verification Temperature ODEs Energy Equations Control Module Specification Parameters Module
Software Decision	Sequence Data Structure ODE Solver Plotting

Table 1: Module Hierarchy

## 6 MIS of [Module Name —SS]

[Use labels for cross-referencing —SS]

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use L<sup>A</sup>T<sub>E</sub>X for hyperlinks to external documents. —SS]

### 6.1 Module

[Short name for the module —SS]

### 6.2 Uses

### 6.3 Syntax

#### 6.3.1 Exported Constants

#### 6.3.2 Exported Access Programs

Name	In	Out	Exceptions
[accessProg —SS]	-	-	-

### 6.4 Semantics

#### 6.4.1 State Variables

[Not all modules will have state variables. State variables give the module a memory. —SS]

#### 6.4.2 Environment Variables

[This section is not necessary for all modules. Its purpose is to capture when the module has external interaction with the environment, such as for a device driver, screen interface, keyboard, file, etc. —SS]

#### 6.4.3 Assumptions

[Try to minimize assumptions and anticipate programmer errors via exceptions, but for practical purposes assumptions are sometimes appropriate. —SS]

#### 6.4.4 Access Routine Semantics

[accessProg —SS]():

- transition: [if appropriate —SS]
- output: [if appropriate —SS]

- exception: [if appropriate —SS]

[A module without environment variables or state variables is unlikely to have a state transition. In this case a state transition can only occur if the module is changing the state of another module. —SS]

[Modules rarely have both a transition and an output. In most cases you will have one or the other. —SS]

#### **6.4.5 Local Functions**

[As appropriate —SS] [These functions are for the purpose of specification. They are not necessarily something that is going to be implemented explicitly. Even if they are implemented, they are not exported; they only have local scope. —SS]

## 7 MIS of Sensor Reading Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use  $\LaTeX$  for hyperlinks to external documents. —SS]

### 7.1 Module

M1: Sensor Reading Module.

### 7.2 Uses

Used to gather data on user presence in shared space.

### 7.3 Syntax

#### 7.3.1 Exported Constants

#### 7.3.2 Exported Access Programs

Name	In	Out	Exceptions
timeMotion	timesOfMotion	timeMotionDetected	-
detector	sensorData	motionPresent	-
insertTime	-	-	-

### 7.4 Semantics

#### 7.4.1 State Variables

timesOfMotion.

#### 7.4.2 Environment Variables

sensorData.

#### 7.4.3 Access Routine Semantics

timeMotion(timesOfMotion):

- input: List of time stamps of when motion was detected.
- output: Last timestamp of when motion was detected.

detector(sensorData):

- input: Data received from sensor.
- output: True or false value depending on if motion was detected.

#### **7.4.4 Local Functions**

`insertTime()` - Inserting time stamp into `timesOfMotion` variable.

## 8 MIS of Image Capture Module

### 8.1 Module

M2: Image Capture Module.

### 8.2 Uses

Used to gather data on user presence in shared space.

### 8.3 Syntax

#### 8.3.1 Exported Constants

#### 8.3.2 Exported Access Programs

Name	In	Out	Exceptions
captureImage	motionPresent	image	-

### 8.4 Semantics

#### 8.4.1 Access Routine Semantics

captureImage(motionPresent):

- input: Boolean value of if motion was detected by sensor.
- output: Image taken.

## 9 MIS of Image Upload Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use  $\LaTeX$  for hyperlinks to external documents. —SS]

### 9.1 Module

M3: Image Upload Module.

### 9.2 Uses

Uploads the captured image to system for cleanliness detection.

### 9.3 Syntax

#### 9.3.1 Exported Constants

#### 9.3.2 Exported Access Programs

Name	In	Out	Exceptions
uploadImage	image	status	-

### 9.4 Semantics

#### 9.4.1 Access Routine Semantics

uploadImage(image):

- input: Image taken from camera.
- output: Boolean of upload status.

#### 9.4.2 Local Functions

captureImage(motionPresent) - Takes picture to upload.

## 10 MIS of Request Listener Module

[You can reference SRS labels, such as R??. —SS]

[It is also possible to use  $\LaTeX$  for hyperlinks to external documents. —SS]

### 10.1 Module

M7: Request Listener Module.

### 10.2 Uses

Exposes cleanliness detector to camera and image by making it an application programming interface.

### 10.3 Syntax

#### 10.3.1 Exported Constants

#### 10.3.2 Exported Access Programs

Name	In	Out	Exceptions
getImages	-	images	-

### 10.4 Semantics

#### 10.4.1 Access Routine Semantics

getImages():

- output: Two most recent images where one is the before and other is the after state of shared space after user is finished.

# 11 Appendix

[Extra information if required —SS]

## Appendix — Reflection

[Not required for CAS 741 projects —SS]

The information in this section will be used to evaluate the team members on the graduate attribute of Problem Analysis and Design.

The purpose of reflection questions is to give you a chance to assess your own learning and that of your group as a whole, and to find ways to improve in the future. Reflection is an important part of the learning process. Reflection is also an essential component of a successful software development process.

Reflections are most interesting and useful when they're honest, even if the stories they tell are imperfect. You will be marked based on your depth of thought and analysis, and not based on the content of the reflections themselves. Thus, for full marks we encourage you to answer openly and honestly and to avoid simply writing “what you think the evaluator wants to hear.”

Please answer the following questions. Some questions can be answered on the team level, but where appropriate, each team member should write their own response:

1. What went well while writing this deliverable?
2. What pain points did you experience during this deliverable, and how did you resolve them?
3. Which of your design decisions stemmed from speaking to your client(s) or a proxy (e.g. your peers, stakeholders, potential users)? For those that were not, why, and where did they come from?
4. While creating the design doc, what parts of your other documents (e.g. requirements, hazard analysis, etc), if any, needed to be changed, and why?
5. What are the limitations of your solution? Put another way, given unlimited resources, what could you do to make the project better? (LO\_ProbSolutions)
6. Give a brief overview of other design solutions you considered. What are the benefits and tradeoffs of those other designs compared with the chosen design? From all the potential options, why did you select the documented design? (LO\_Explores)
